

Installation

MagnaClean® Professional has been developed by the company that pioneered magnetic filtration. ADEY's filters protect more than three million heating systems in homes throughout Europe removing virtually 100% of the damaging suspended black oxide sludge that builds up in all heating systems.

The dual-action filter can be installed anywhere on the main circuit. However, to achieve the best level of protection for the boiler, it is recommended that *MagnaClean Professional* is fitted after the last radiator and before the boiler. In determining a suitable location, it is important to allow adequate access for servicing.

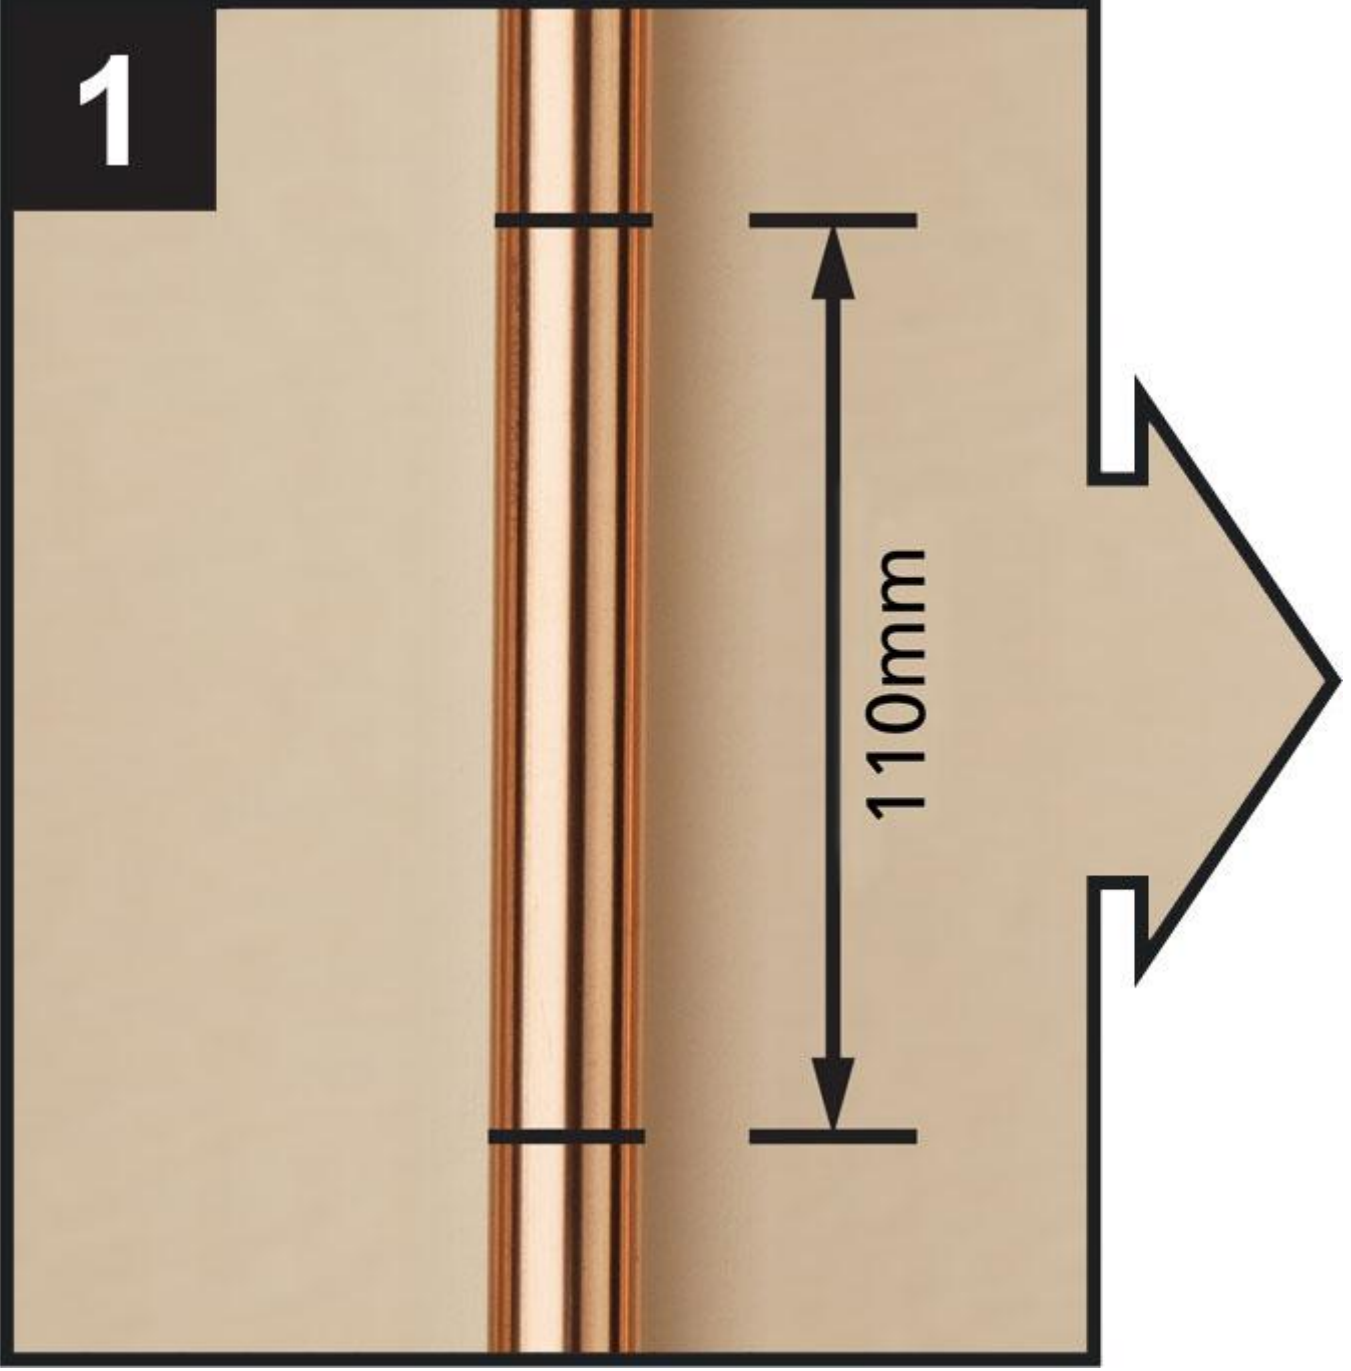

The following instructions are designed to support engineers in the safe and effective installation and servicing of *MagnaClean Professional* and should be followed at all times. Any queries should be directed to your supervisor or ADEY direct on : 01242 546700.

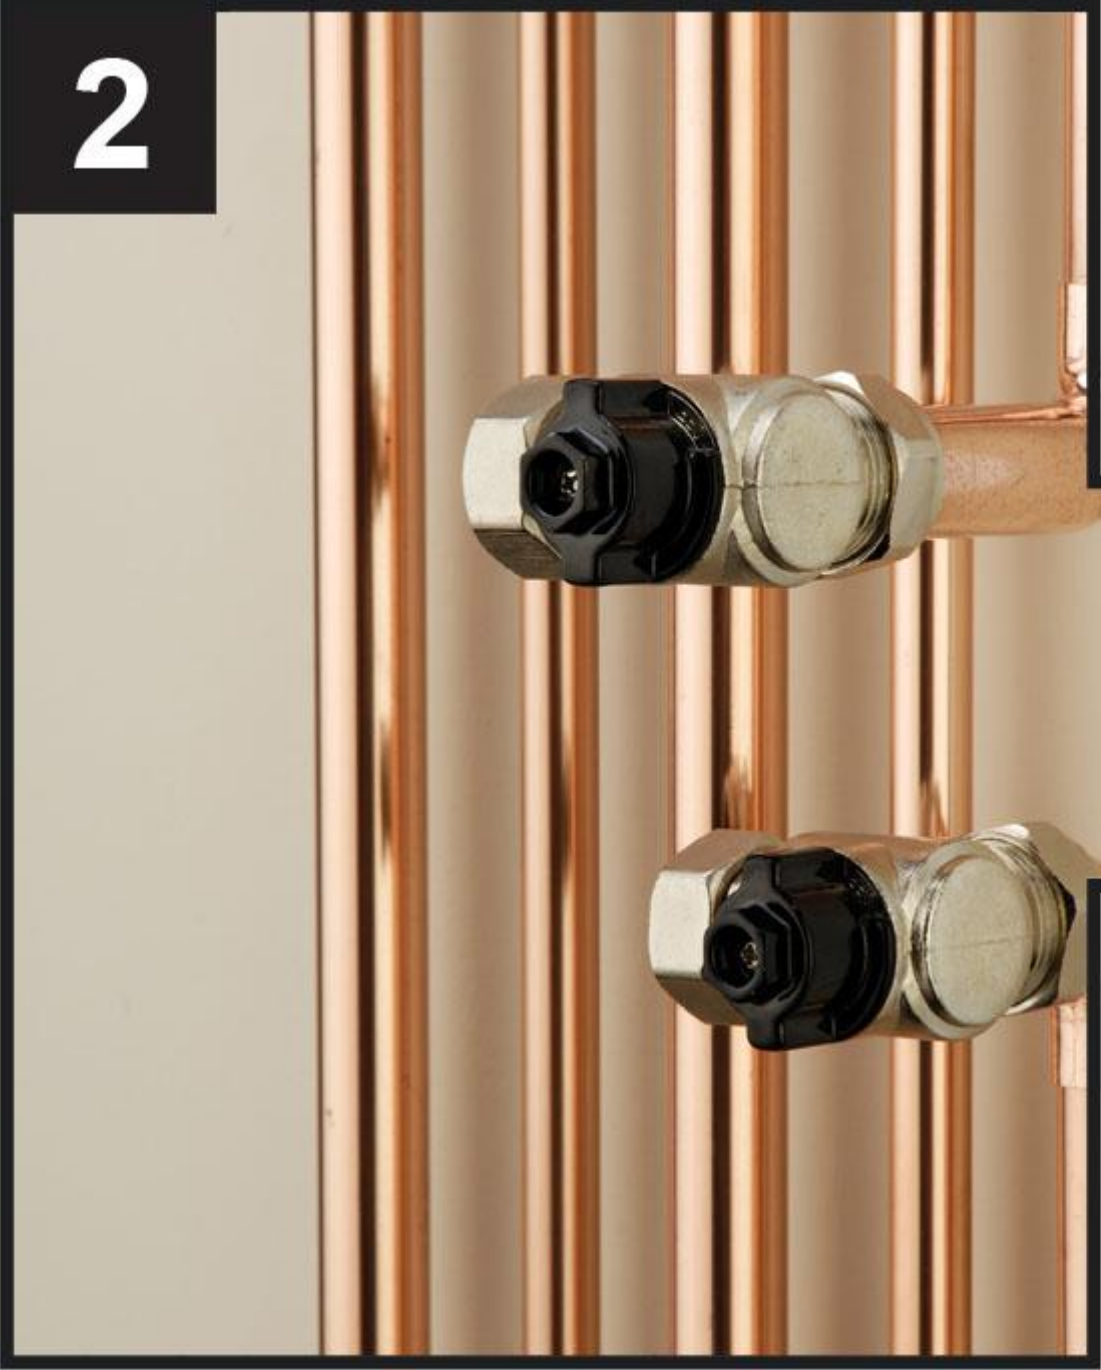

In both diagrams, position **A** is recommended as part of ADEY's Best Practice™ approach.
Position **B** is suitable if space is tight on the return.

When completing a *MagnaCleanse* always ensure this is installed and carried out on the return pipe of the system for optimum boiler protection.

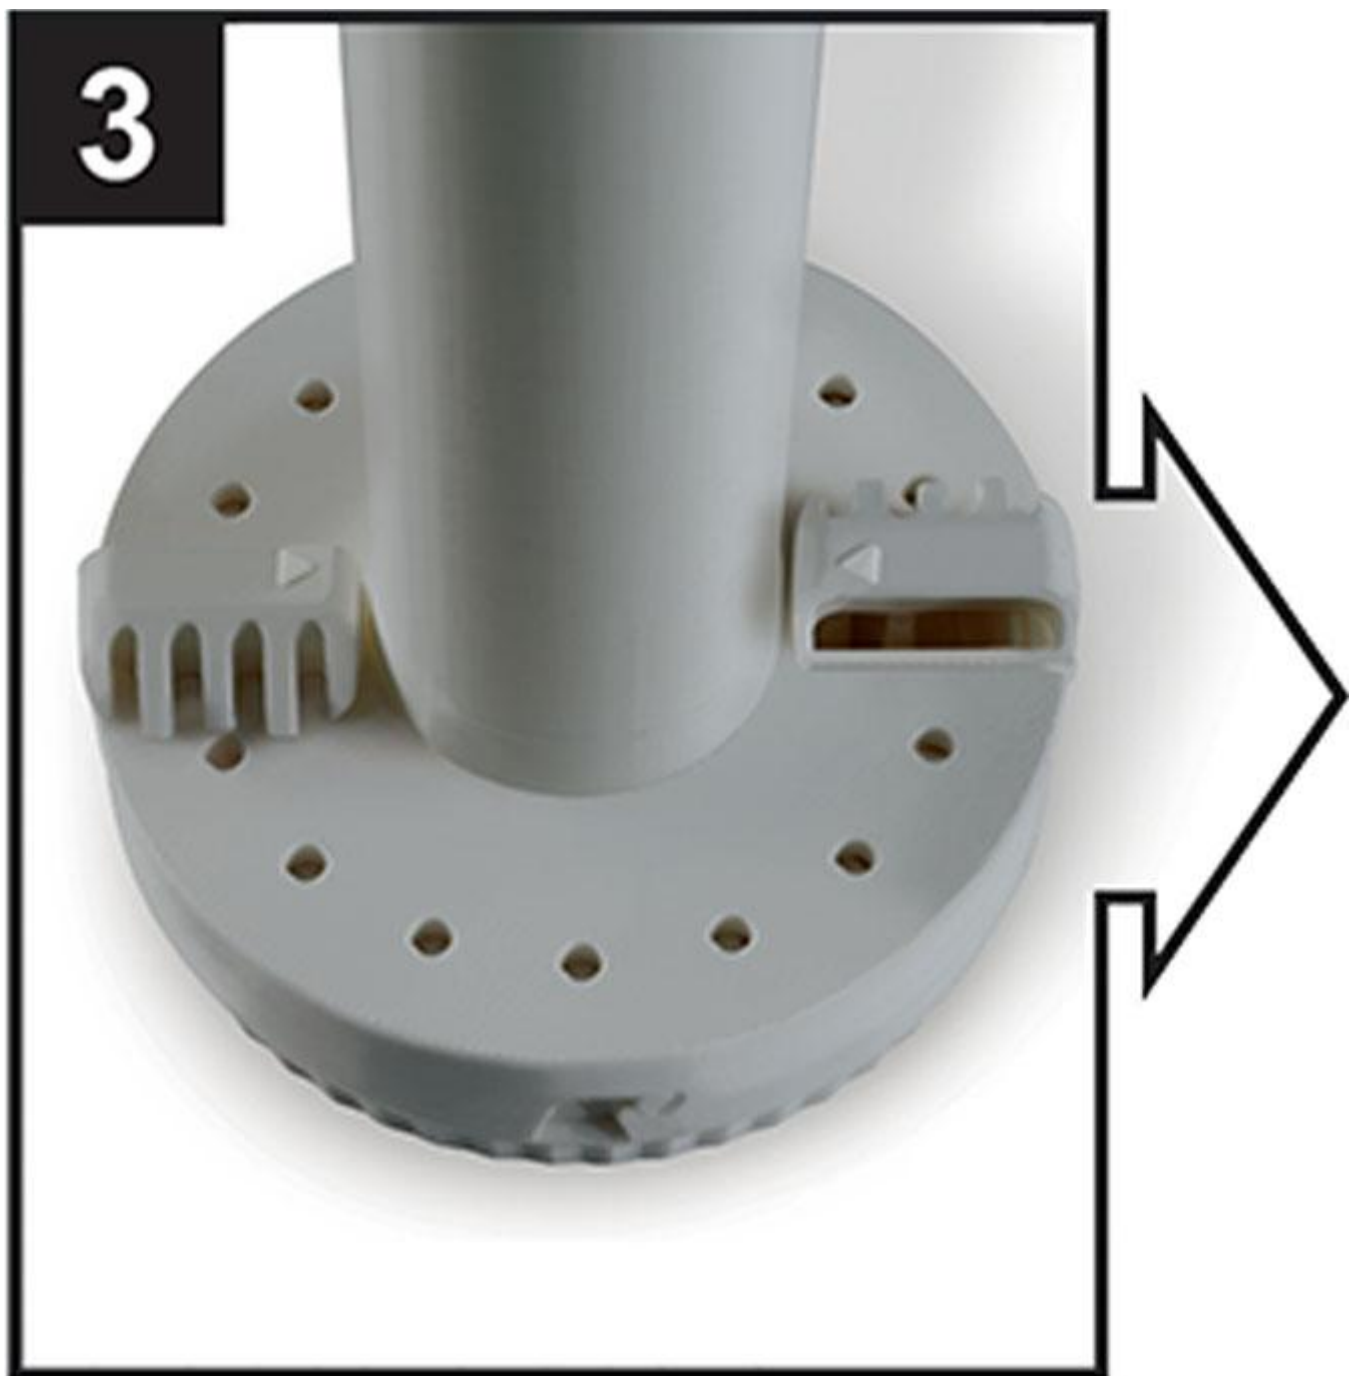

Note: We firmly recommend *MagnaClean Professional* is installed and serviced by a qualified engineer.
